

Decentralized self-sovereign identity

A new standard for digital identity

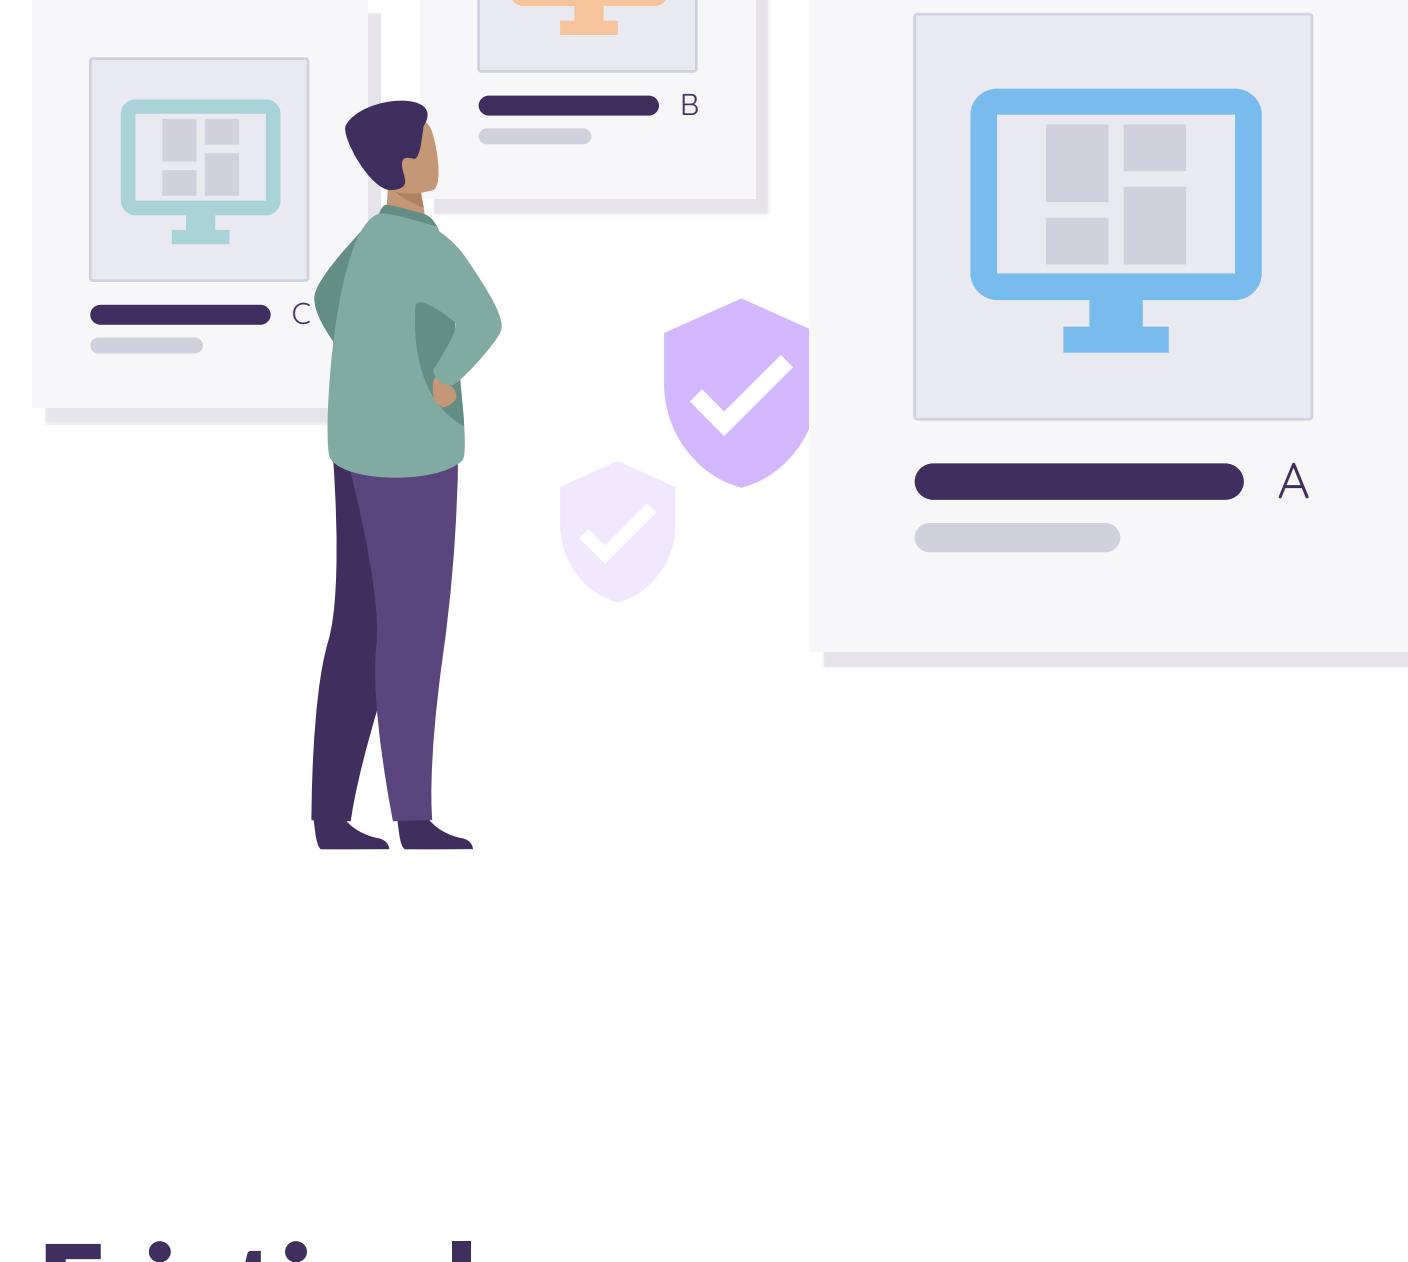

Verify ID once. Use everywhere.*

* Compatible platforms only

Vivid is an easy-to-use, decentralized identity solution that gets new users into your platform quicker and provides you with reliable and cost-effective user authentication, while addressing privacy and compliance requirements.

It also gives individuals full control of their identity, privacy and the data they share with third parties.

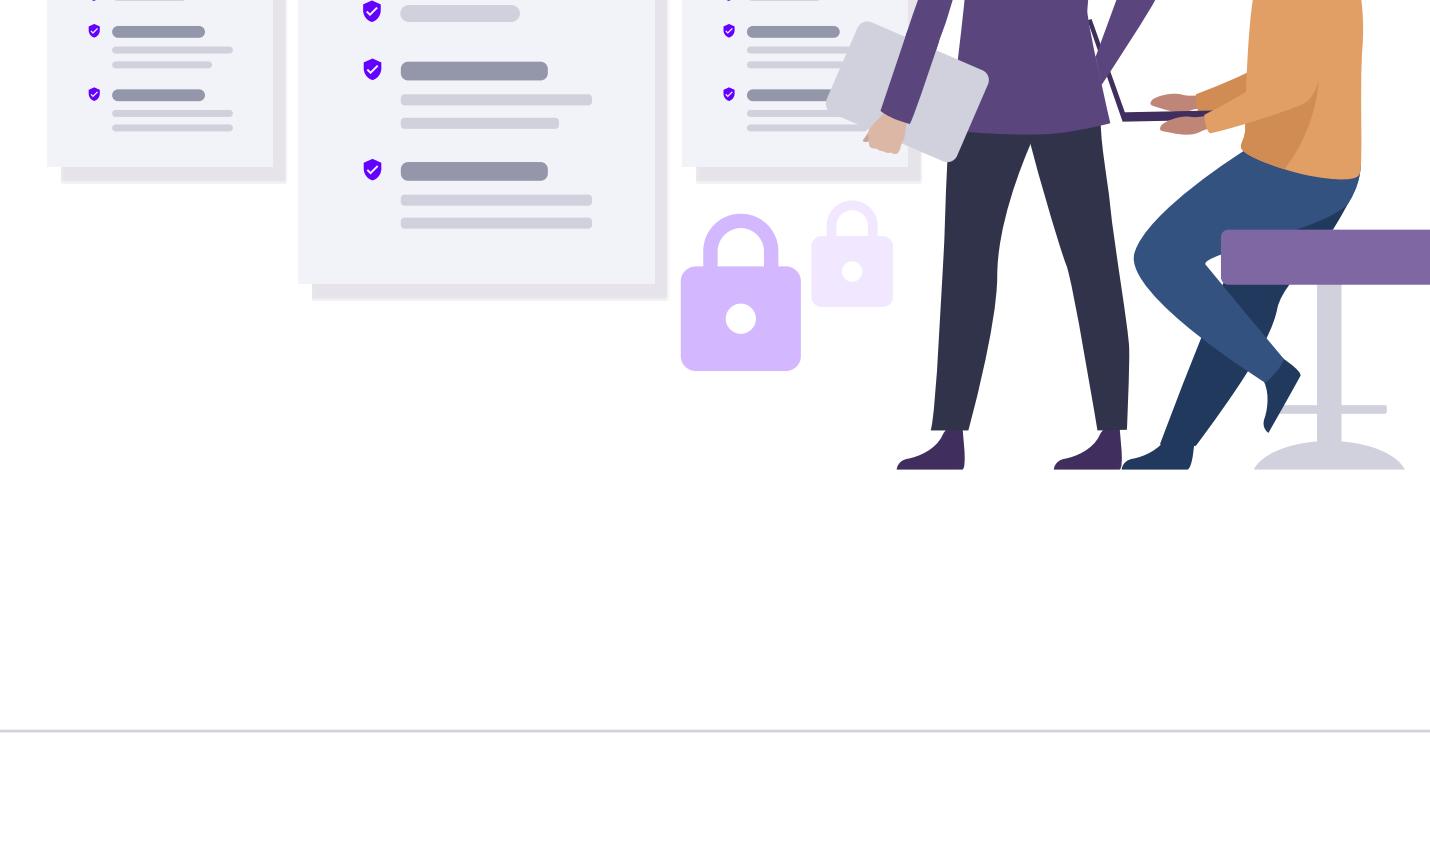

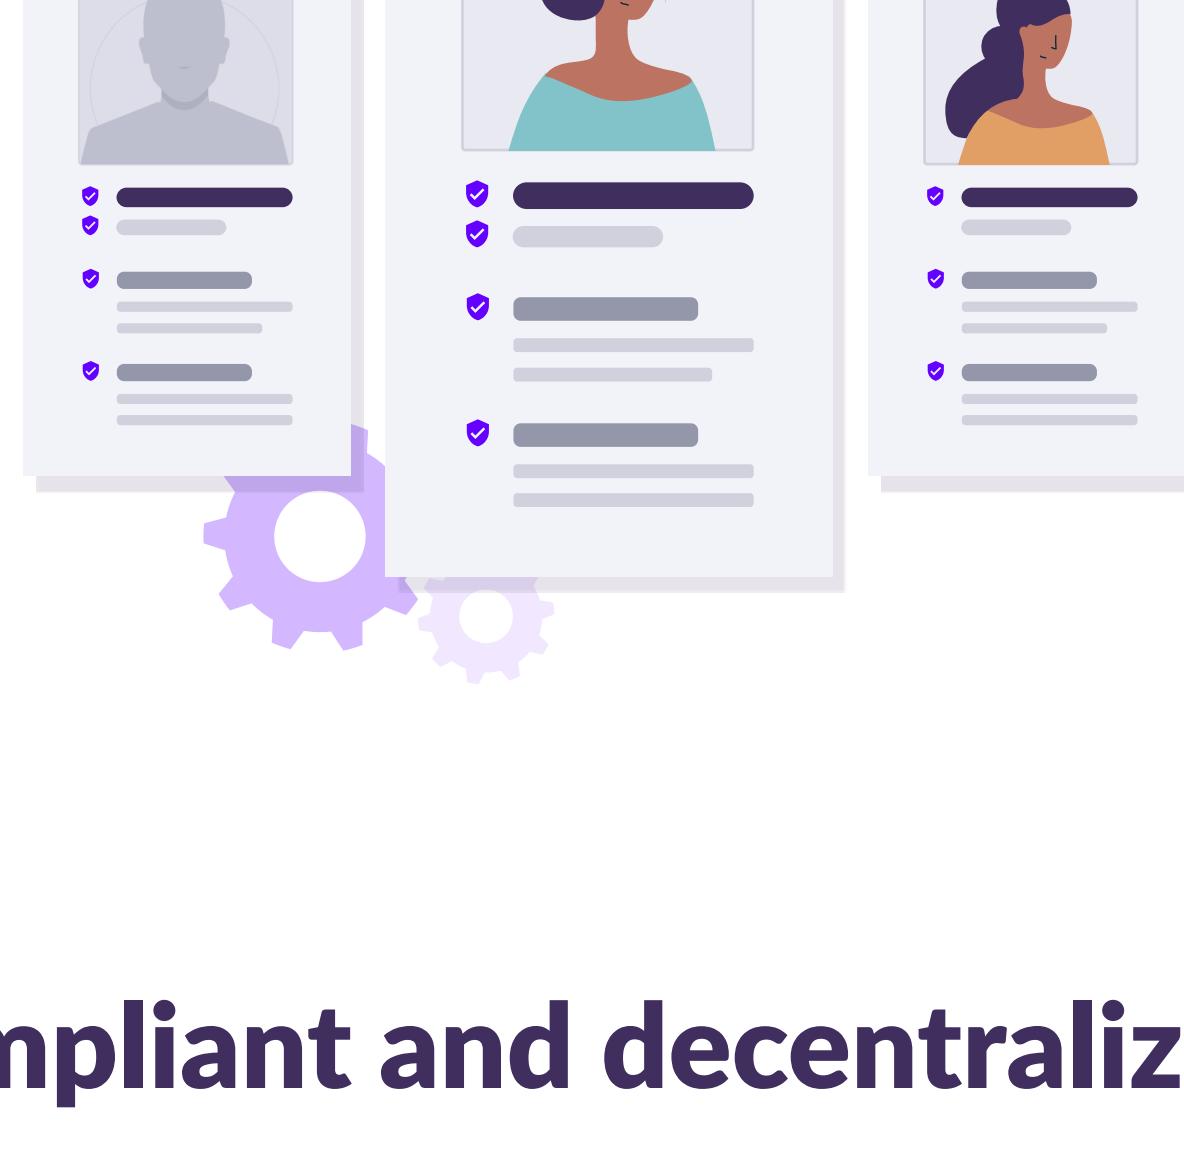

Quick and easy

Single sign-on (SSO) enables users to quickly and securely **authenticate with multiple applications and websites by using just one set of credentials**. For businesses, it simplifies access management, while meeting **global data privacy requirements**.

Frictionless

Currently, user verification is handled on an individual basis where each platform has their own system of authentication.

Vivid allows your customers to easily move between multiple applications without having to repeatedly register for each app. Businesses also benefit from a substantial cost saving because user credentials are transferrable between compatible products.

Compliant and decentralized

- ✓ Vivid is able to **guarantee the anonymity of the user data** provided by all parties.
- ✓ Our advanced hashing algorithm **protects your customer data at all times**, encrypting user data at rest as well as in transit.
- ✓ **Defend** against data breaches and identity theft

Quick and secure user verification.

Designed for interoperability.

Low cost.
